May 30 2011

Att: RCE Division (Please deliver this fax to RCE) Request.The Applicant is respectfully requesting a different Examiner. This Application was filed in 2003

Reason for this Request: The Examiner and the Applicant appear not to reach a common understanding.

The Examiner has acknowledged that his previous 35 U. S. C. 103 (a) citing of

Delaite (European publication WO 01/13499) is moot

because of Delaite's teaching away from the Gerfast Application in at least eight different way.

Therefore, the 103 (obvious rejection) has been resolved. (see Examiners 4/15/2011 paper Page 4 lines 11-14)

The Examiners only remaining issue appears to be: The word "Like" in claim 1 and Claim 9"said rotor having a plurality of poles, a stator with a like number of salient poles"The Applicant has sub sequentially amended wording in Claims 1 and 9 to read "equal" instead of "like"(in the Applicant's April 30 2011 paper) to try to clarify "the Examiner's un-clear understanding" of"is indefinite because it is unclear what is so-called 'a like number' in 'a like number of salient poles'"

Examiner's 4/15/2011 Paper Page 3, lines 19- 22 and Page 4 lines 6-8.

In addition the Applicant has provided (Nov. 28 2010): (instead of a Partial Drawing view)a full view of the Drawing of the stator and rotor (see Replacement Drawing Sheet) to further clarify"the Examiner's un-clear understanding of this invention.

Webster's Collegiate dictionary definition: Like 1 a: "the same or nearly the same (as in appearance, character, or quantity)  
The Random House unabridged dictionary definition Like 1 "of the same form, appearance, kind, character, amount, etc."  
"like number" is used both in common language and in Patent language; (U.S. 6,940,326, U.S. 6,850,019 and others)

The Applicant in Nov. 28 2010 paper further cancelled Claims 5, 14 and 21 to position this Application in a better position for allowance. And to further clarify, Applicant also stated in his April 30 2011 paper:

The original specification (2003) (Page 5 and 6) clearly describes: [clearly also in Claim 1 and Claim 9]

"new type stator winding with the same number of stator poles as the rotor poles"

"with alternately wound (north/south) coils, connected in series, forming a single coil with two free ends"

This clearly describes (in very concise words) the present invention and therefore

clearly establishes that the Applicant had the possession of the claimed invention at the time of filing

Lines 1-3 and lines 13-15 on page 5 of the original 2003 Specifications  
and copied in the amended page 5 submitted on November 28 2010

Contrary to the Examiners statements (4/15/2011 page 3 lines 1-13) "that the specification description and the drawing does not provide support for the amended Claim language" .....Page 5 in the 2003 specifications (as well as in amended page 5) lines 13-15 (Also submitted on November 28 2010) states and supports the Claims:

"a rotor journaled in a generator frame, said rotor having a plurality of poles, also having a stator

with a like number of poles, each including alternately wound coils forming a single coil

with two free ends, connected to an AC load" .....(See also Fig. 1 )

This establishes that the Specification and the Claims are supported.

With the Examiner's refusal to enter the amendments in Applicants Nov. 28 2010 paper (and in previous papers)

refusal to enter the Applicants Nov. 28 2010 full view of the Drawing Fig.1.;

refusal to enter the Applicants April 30 2011 paper; and to not accept clarifications;

the Applicant received an abandonment letter, day before yesterday;

therefore, the Applicant is courteously soliciting a change of Examiner.

Respectfully submitted.
